

CMC 256plus

CMC 256plus: 6 Phase Current + 4 Phase Voltage Test Set and Universal Calibrator

The CMC 256plus is the first choice for applications requiring very high accuracy. This unit is not only an excellent test set for protection devices of all kinds but also a universal calibration tool. Its high precision allows the calibration of a wide range of measuring devices, including: electricity meters of class 0.2, measuring transducers, power quality measurement devices and phasor measurement units (PMU). Its unique accuracy and flexibility make the CMC 256plus ideal for protection and measurement equipment manufacturers for research and development, production and type testing. The CMC 256plus can either be operated by the Test Universe software running on a PC or by the front panel control device CMControl.

With the unique PermaSync functionality (supported by TU 2.30 or higher), analog and Sampled Values outputs stay permanently in sync with the internal CMC time reference. In combination with the optional CMIRIG-B interface box, PermaSync additionally allows the continuous synchronization of the output quantities with an external IRIG-B time protocol or an external PPS signal. With CMIRIG-B it is also possible to transmit the internal PPS signal of the CMC to the device under test (e.g. PMUs or IEDs stimulated with a synchronized Sampled Values data stream).

¹ For directly testing relays with low level inputs by simulating signals from non conventional CTs and VTs with low level interfaces and for controlling external amplifier units

² THD+N: Values at 50/60 Hz, 20 kHz measurement bandwidth, nominal value, and nominal load

³ rd. = reading, rg. = range

⁴ Up to three inputs can be used for measuring RMS values, frequency, and phase angle without the Enerlyzer software license. Full functionality requires Enerlyzer software license

¹ Testing with GOOSE and Sampled Values functionality requires software licences for the corresponding configuration modules

² For line inputs below 115 VAC, it is not possible to drive all outputs (voltage output, current output, Aux DC) simultaneously at full load. All other technical specifications (e.g. the maximum output power of a single amplifier) are not affected

³ For an operational temperature above +30 °C (+86 °F) a duty cycle of down to 50 % may apply

⁴ PoE = Power over Ethernet

⁵ CMC 256plus with PAR-1 option is connected to the USB port of the PC by means of the parallelport cable and the CMUSB-P (USB to Parallel Port Converter). CMC 256plus equipped with the PAR-1 option can not be extended with the LLO-2 option and does not support the CMIRIG-B accessory
